TECHNICAL SKILLS

Languages

- Java
- Python
- HTML & CSS
- JavaScript

Frameworks

- Spring Boot
- React.js
- Bootstrap

Databases & Tools

- MySQL
- Figma
- Git & GitHub

LANGUAGES

English

Urdu

PROFILE

Dynamic and solutions-oriented Software Engineer with robust full-stack capabilities and three years of applied experience developing scalable web applications. Passionate about modernizing architectures, I specialize in transitioning backend-heavy systems to decoupled, responsive frameworks. I thrive at the intersection of complex problem-solving and intuitive user experience design, actively leveraging the Java Spring Boot ecosystem and modern frontend tools to build reliable, high-performance digital products. A collaborative team player committed to continuous learning and driving impactful technological innovation.

EDUCATION

Bachelors in Software Engineering 2023 - Present

Mohammad Ali Jinnah University

Intermediate - Pre-Engineering 2021 - 2023

SM-Govt College

Matriculation - Pre-Engineering 2019 - 2021

The Foundation Grammar School

KEY PROJECTS

▪ MindCare - Digital Therapy Platform

Engineered an anonymous mental health support application using a Spring Boot backend, MySQL, and a React.js frontend. Spearheaded a secure email-only authentication system—removing traditional username dependencies—and developed core functionalities including dynamic triage questionnaires and real-time session booking.

▪ Financial Fraud Detection System

Architected a Python and MySQL-based analysis system to identify anomalous and suspicious activity within transactional data. Implemented structured detection logic to significantly improve data handling efficiency, demonstrating practical application of data structures and problem-solving methodologies.

▪ CRUD Library Management Engine

Developed a robust library management application focused on backend reliability using Spring Boot and MySQL. Streamlined the organization of books and user records, strengthening foundational database integration skills and establishing clean, manageable codebase architectures.
